A MODULAR SHELVING SYSTEM SHAPED BY MATERIAL INNOVATION

Pap Bookcase is a modular shelving system designed by industrial designer Tetsu Schokking, where material research and functional clarity form the foundation of the design.

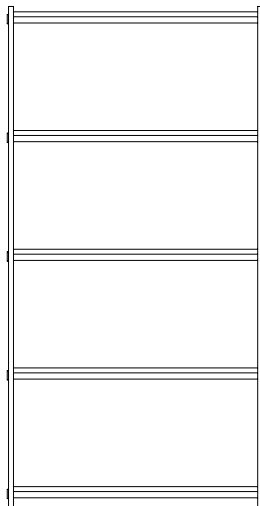

It is made from panels produced from discarded food cartons, including milk cartons and other food packaging that would otherwise be incinerated. The cartons are shredded coarsely, allowing fragments of the original packaging to remain visible, while the plastic layers are melted and act as natural binders. No chemicals are used in the process.

The result is a warm, tactile, and expressive material where no two panels are ever the same—each carrying subtle variations in color and pattern while maintaining an overall calm and balanced appearance.

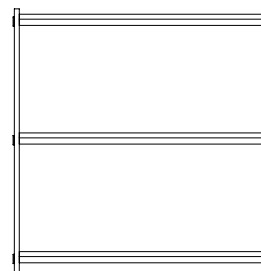

COLLECTION OVERVIEW

Pap Bookcase High Extension
2 pcs

Pap Bookcase High
H: 72,5 x W: 95 x D: 79,5 x SH: 42,5 cm

Pap Bookcase Low
H: 69 x W: 71 x D: 77 cm

Pap Bookcase Low Extension
H: 69 x W: 71 x D: 77 cm

PRODUCT FACTS

Description

Pap Bookcase is a modular shelving system made from recycled discarded waste transformed into durable panels, combined with sturdy metal tubes. The expressive material is balanced by a simple, archetypal structure that keeps the visual calm. Available in high and low versions that can be combined and expanded to adapt to changing needs.

Designer / Year Of Design

Tetsu Schokking / 2026

Material

100 % recycled packaging waste, metal tubes

Construction

The Pap Bookcase is made from panels of recycled packaging, connected with metal tubes to stabilize the frame of the bookcase. Shelves are adjustable in height. The panels are produced without the use of chemicals and feature visible fragments from the original packaging, resulting in natural variation in color and pattern. The material can be granulated and reused. Delivered flat-packed for easy assembly. Pap Bookcase comes in a high variant with 5 shelves and a low variant with 3 shelves.

Maintenance

Dust off with a dry cloth

MATERIAL OPTIONS

Multi
